The number of paired devices: 2/8
Set the PIN code
PIN code not programmed in the SEO CANblu memory
SEO CANblu
Service mode
Caution! Activating the service mode disables vehicle protection. You can switch on the service mode only within 60 seconds of switching on the ignition (with the engine switched off). Remember to disable the service mode when you pick up the vehicle from the service. Activation of the service mode will be confirmed by flashing the indicator in the vehicle 5 times

OK
Programming procedure
Initiating the procedure of pairing/ programming a new smartphone or wireless transmitter. Complete the entire process within 30 seconds of switching on the ignition. Make sure the wireless transmitter is not paired with another SEO CANblu immobilizer, switched on and within SEO CANblu range. Immediately after entering the programming procedure, press the wireless transmitter button once. Start the pairing procedure using the phone. For the procedure to be successful, you need to do it shortly after switching on the ignition - a new device must appear within the range of SEO CANblu within 30 seconds of switching on the ignition

Programming procedure
Initiating the procedure of programming the PIN code using the buttons available in the vehicle - the list is available in the connection diagram or with the installer. For the procedure to succeed, you must complete it shortly after switching on the ignition - start entering the PIN code within 30 seconds of switching on the ignition. After pressing all the PIN code buttons, turn the ignition off so that the key combination will be saved
